

Knock

Opportunity knocks. We make sure you hear it.

Tell Knock about yourself in your own language. It finds every welfare scheme and scholarship you qualify for, then shows you how to claim it.

MEET ANANYA

Sharp, connected, but never told

Ananya, 18

First-year B.Tech student. 94% in her Class 12 boards. Lives on UPI, YouTube and Instagram. Reads every page she is given.

"I assumed scholarships were someone else's thing. Nobody told me to check."

Class 12 Scores 94% and joins a good engineering college.

Year 1 Never hears of the scholarships open to students like him/her.

Year 3 A senior mentions one. Its deadline passed two years ago.

Not a reading problem. A discovery problem.

THE PROBLEM

Three walls between students and what they are owed

1

Nobody tells you

No one knocks first. Students learn about schemes from seniors, often too late.

2

Scattered everywhere

3,000+ schemes across Centre and State portals, each with its own login and deadline.

3

Rules too tangled

Income, category, domicile, course and marks, stacked inside long notifications.

Directories list schemes. Nobody asks you the right questions. Knock does, in your language.

OUR SOLUTION

Knock asks five questions and finds her schemes

1

Say it

“Main Bengaluru se
hoon, first-year
B.Tech, boards mein
94%.” By voice or
WhatsApp.

2

Five questions

State, age, family
income, category,
course. No forms, no
portals.

3

Get matches

Ranked schemes with
benefit, deadline, and
the exact rule that
qualifies her.

4

Claim it

Document checklist,
portal link, and
reminders before every
deadline.

She speaks. Knock does the reading.

Two paths: citizens ask, It Shows the answers.

RUNTIME(what a citizen touches)

Citizen speaks or types

Channel adapter (Web / WhatsApp)

Language layer (STT, detect)

Profile agent (5 questions)

Rule engine (deterministic)

Explainer + voice reply

Matches, checklist, reminders

BUILD AND MAINTAIN (the engine)

Source: scheme PDF or URL

Cline reads it

Cline extracts rules JSON

Cline writes + runs tests

Human approves the diff

Commit to knowledge pack

Nightly watch for changes

KNOWLEDGE PACK: rules JSON + tests + source links + deadlines (SQLite). Read by the rule engine, written only by Cline after human approval.

Orange = Cline agent step ·Green = human gate .Citizens never trigger this path, so a slow model never blocks an answer.

HOW WE USE CLINE

Cline is the engine behind our knowledge base

<code>ClineCore.start()</code>	One session per scheme source, saved on disk
<code>fetch_web · read_files</code>	Pull the gazette PDF or portal page
<code>apply_patch · editor</code>	Write and fix the eligibility rules JSON
<code>bash</code>	Run test profiles through the rule engine
<code>requestToolApproval</code>	Every write waits in our approval queue
<code>automation (cron)</code>	Nightly re-check of every source

Model: Claude, any OpenAI-compatible API, or local Ollama. One config line.

The split

Cline

reads, writes, tests, maintains

Rule engine

decides eligibility, same answer every time

LLM

language and explanation only

What the user touches

★ = default.

Channel	★ WhatsApp (Twilio) Where users already are. Sandbox is quick to set up.	Web PWA with mic No approvals needed. Works on any phone.	Telegram bot Free, instant. Backup if WhatsApp lags.
Speech to text	★ Whisper API or local whisper.cpp. Strong Hindi.	Browser Web Speech API Free, on-device. Chrome only.	Sarvam / Deepgram Indic-focused APIs, low latency.
Voice reply	★ Browser speech synthesis Free, no keys, instant.	Google Cloud TTS Natural Indian-language voices.	ElevenLabs / Sarvam Most natural. Paid.
Frontend	★ Next.js PWA Polished, installable on phones.	Vite + React Lightest, fastest to scaffold.	Streamlit / Gradio Working demo in an hour if time runs short.

The brain

★ = default

Orchestrator	★ Node 22 + Fastify Cline SDK runs natively here.	Next.js API routes One repo, fewer moving parts.	FastAPI + Cline CLI For a Python-first team. Spawn cline --json.
Language model	★ Claude Best reasoning and plain-language explanations.	OpenAI-compatible API OpenRouter gives 200+ models.	Local Ollama Offline, zero cost. Weaker Hindi.
Rule engine	★ TypeScript predicates Simple, fully testable, no dependencies.	json-rules-engine / JSONLogic Off-the-shelf rule format.	Python + Pydantic If the backend is Python.
Cline runtime	★ @cline/sdk embedded ClineCore inside our service.	Cline CLI headless Spawn from any language.	Cline in the IDE Fallback: build live, skip embedding.

Data and operations

★ = default

Knowledge store	★ SQLite + JSON in git Rule changes show as reviewable diffs.	Supabase Postgres Hosted, multi-user.	Google Sheets / Airtable Non-developers edit schemes live.
Source ingestion	★ Cline fetch + read Reads PDFs and pages directly.	pdfplumber / PyMuPDF Pre-parse messy PDFs, then Cline.	Hand-curated seed Guaranteed demo. Label it as seed data.
Reminders	★ node-cron + WhatsApp Simple and reliable.	Cline scheduled agent Shows Cline at the centre.	GitHub Actions cron No server to run.
Hosting	★ Laptop + ngrok Works even if venue Wi-Fi fails.	Vercel + Render Public link for judges.	Docker compose One command, repeatable.

BUILT TO FLEX

Swap the pack, keep the engine, then scale

Health benefits

Ayushman Bharat and state health schemes.

Farm subsidies

PM-KISAN, crop insurance, MSP rules.

Legal aid and MSME

Eligibility plus compliance calendar.

TODAY

30 schemes, Hindi + English, web + WhatsApp

+3 MONTHS

300+ schemes, 10 languages, Android app

+12 MONTHS

DigiLocker + UPI autofill, state pilots

Free for citizens · API licence for NGOs · Pilots with governments

Knock Opportunity knocks. We make sure you hear it.
